
Strive

A real AI course on anything you want to learn

STRIVE-LEARNING.COM

THE PROBLEM

Finishing a course and *keeping* it are different things.

Reading a clear explanation produces a strong feeling of understanding and a weak memory. It is one of the most replicated findings in cognitive psychology, and it is why re-reading remains the most popular and least effective way to study.

AI arguably makes it worse. AI explanations are unusually fluent, and fluency is precisely the cue people misread as mastery.

WHAT STRIVE IS

A course designed for *your* goal, that comes back to find you.

You arrive with a goal in plain language and a few honest sentences about what you already know. Strive designs a full curriculum — modules, lessons, quizzes — then keeps bringing the material back until it sticks.

01

Designed per goal

02

Written as you read

03

Returned on a schedule

HOW IT WORKS

- 1 State the goal.** One sentence. Strive asks a clarifying questionnaire generated specifically for it.
- 2 Approve the curriculum.** An agent designs modules and lessons; you refine the structure by chatting with it before anything is written.
- 3 Study.** Each lesson is written the moment you open it and streams onto the page block by block.
- 4 Keep it.** Every lesson seeds recall cards that return at 1, 3, 7, 14 and 30 days.

PERSONALISATION THAT SUBTRACTS

Real personalisation *removes* things.

"Beginner / intermediate / advanced" is a single ordinal for something that is not ordinal. A senior backend engineer learning React is not "intermediate" — they are expert at some of it and naive about the rest.

Because the questionnaire is generated from your goal *and* your stated background, the curriculum can drop a module rather than reword it.

LESSONS, WRITTEN ON DEMAND

Nothing is generated for lessons you never open.

The structure is designed up front; each lesson is written when you open it and streams in block by block — explanation, code, diagrams, formulas, inline checks.

A lesson can therefore take account of what you have done since the course was designed.

ASSESSMENT

Questions that need two lessons at once.

Generated questions default to the easy kind — definitions, single facts, things that appear verbatim in one paragraph. Answering them correctly tells you almost nothing.

Module quizzes test synthesis *across* lessons, which is the category that real work and real exams actually live in.

THE PART THAT COMPOUNDS

1 · 3 · 7 · 14 · 30

Every lesson seeds 3–5 small recall cards, scheduled at expanding intervals so each one returns just as it starts to fade.

Distributed practice and practice testing are the only two techniques a major review of ten common study methods rated *high* utility. Both feel worse than re-reading. That discomfort is the mechanism, not a side effect.

Dunlosky et al., *Psychological Science in the Public Interest*, 2013 · Cepeda et al., *Psychological Bulletin*, 2006

WHAT IT IS NOT

Not a ChatGPT wrapper. The product is the structure around the model: goal classification, a per-goal questionnaire, a curriculum-design agent, typed lesson blocks, synthesis quizzes, a spaced-repetition scheduler.

Not a flashcard app. The recall queue is one component, not the product.

Not a course catalogue. There is nothing to browse — every course is generated for one person.

Not accredited. No certificates, no credits, no diplomas.

WHO IT'S FOR

Skill-monetisers	Not "Fundamentals of Digital Marketing" — <i>your</i> channel, <i>your</i> product, module by module.
Practical-AI learners	Structure in a chaotic field. A curriculum instead of a hundred random threads.
Exam crammers	Give it the syllabus and the date. It builds the crash course and drills the weak spots.
Self-directed professionals	Skip what you already know.

PLANS

Every plan unlocks every feature.

FREE

\$0

≈ 2 lessons / mo

No credit card

STARTER

\$12.99

≈ 25 lessons / mo

PRO

\$24.99

≈ 55 lessons / mo

STUDIO

\$49.99

≈ 121 lessons / mo

Tiers differ only in monthly generation allowance. Allowance is refunded on failed generations, and lessons you have already generated stay yours.
